

Use Case Number 1 :

Application: Team Add/Change Section

Use Case Name: Modifying Teams

Use Case Description: An administrator should be able to add/change Basketball teams.

Primary Actor: Administrator

Precondition: Admin login should be created as well as the database that is linked to the UI. Teams file should be set up. There should be a sorting method as well.

Trigger: Upon login, a command button will allow the admin to change or add teams by entering team / stadium specifications into text boxes.

Basic Flow:

1. Successful login
2. Admin has access to all stadium information through admin tab window
3. Admin select stadium name from list box along with their information
4. Admin is enable to edit new information
5. Admin clicks command button that states: “submit”
6. The message box is shown which team’s new information is executed.

Alternate Flow:

- Error message is displayed due to Admin not being able to log in properly
- For Addition - team already exists and cannot be added again
- For change - team cannot be changed because the information format isn’t correct
